

BrightDrive Low-latency SAN Server High-Performance File Sharing Expert.

The only low-latency-no-unplanned-downtime-peace-of-mind SAN server.

No degradation, no stuttering video, no dropped frames.

BrightDrive is not an IT server. It is also not just a metadata controller. It is a lot more than that. BrightDrive is a high-performance file server with a unique set of one-of-a-kind features and functionalities specifically designed for the high demands of file based workflows in the media and entertainment industry. Loaded with tools and features, BrightDrive fulfills the most important needs:

Predictable and reliable performance - at peak at all times.

How so? Well, one of BrightDrive's outstanding features is BrightClip®, our patent-pending recording technology. BrightClip eliminates the causes for performance degradation at the root - and therefore ensures that your SAN storage system never loses performance. Ever.

With BrightDrive Media File Server you permanently overcome the problem of file system degradation - for good. BrightClip® creates and maintains optimal file layout on the storage - without fragmentation, sequence randomization, or interleaving. Proactive and in real-time.

Maximize your facility's performance, productivity and profitability.

BrightDrive provides high-speed access for all users at all times - significantly enhancing collaboration between all facility departments. You can focus on the creative processes and considerably reduce time to completion thanks to a smooth, uninterrupted workflow.

Less effort. Lower costs.

Less maintenance effort decreases costs, more uptime increases profitability. And even the hardware saves you money: with the internal virtual SCSI device there's no need for additional meta-data server hardware, and overall your infrastructure will require less power and less cooling.

The right BrightDrive for your needs.

Whether you need an all inclusive SAN-workspace-in-a-box, or a full-function, multi-workspace SAN server, or a fully redundant SAN server set with fail-over - BrightDrive comes in three editions to meet your requirements.

Compatible in every way

All Storage Systems

No need for investment in new hardware - or buy what you like.

All Common Media Applications

Keep your favorite applications - BrightDrive works natively with all file formats.

Protocols / Fabrics

Keep your preferred fabric.

Certified Integration Partner

Bright's Professional Services Group is fully certified and proud to be certified integration partner of:

Quantum StorNext®

Maintenance-free

BrightDrive SAN Server for Media is the only server in the world that provides you with a maintenance-free server file system - over time!

Save time, resources, and money and let BrightDrive do the work for you.

Forget defrag tools - forever.
