BrightClip Advanced Recording Technology
Proactive File Allocation. Perfected.

BrightClip **SA**

Intelligent guardian for high-performance.

BrightClip®, our patent-pending recording technology, is not a file system. BrightClip is the ultimate MDC booster that improves the file system - and the **most intelligent file allocation** solution in the field.

BrightClip is the unique solution that is 100% effective - always.

Intelligent vs. common.

BrightClip is scary smart. By being **sequence-aware** and **file format agnostic**, it does the thinking for you and ensures optimal file layout on the storage subsystem. BrightClip **dynamically adjusts allocation sizes intelligently** as necessary - **in realtime**.
Proactively overcome the problem of file system degradation - for good.

Proactive vs. reactive.

Of course, periodic defragmentation processes might keep the performance of your storage subsystem at peak. However, with BrightClip you can **save that time consuming manual effort** as BrightClip takes care of the **optimal file layout** on the disks - **proactively when files are written**. Let BrightClip handle the problem and do it right in the first place. **Forget defrag tools.**

Less maintenance effort. Lower costs.

Elimination of performance loss due to file fragmentation, randomization, and interleaved files means **no need for time consuming defragmentation** processes. Allowing you time for more important things.
The result: **more uptime** and **increased profitability**. The ROI with BrightClip is truly impressive.

Advanced Software Technology for Media

Key Features

- **Fastest and most efficient solution** for optimal file layout.
- **Understands** file sequences.
- **Recognizes** encoded file names.
- Intelligently **adjusts allocation sizes** dynamically.
- Works **natively** in all file formats.
- Supports **simultaneous recording** of the **heterogeneous formats.**

Benefits

- No loss of system performance.
- **Less effort** for housekeeping.
- **Improved** space and resource management.
- **Maximize** storage system stability, reliability and predictability.
- Boost your **MDC** - give it a **maintenance-free** server file system.
